## ProClick

### ProClick is a hit, and not only among professional tradespeople

*The cleverly thought-out Tool belt system from the market leaders in the segment of high-quality system cases has convinced juries of experts and has claimed two awards.*

A lot of tradespeople are mainly working mobile these days. This means they spend most of their working time away from their workshop, and indeed call to several building sites or customers every day. This, in turn, means tools and construction material must be repeatedly transported to the area of operation, from the vehicle to the building site and in the evening back to the workshop. What is happening here is that a lot of time is being lost preparing, loading, unloading, sorting out as well as searching for the correct component. Often several walks must be undertaken until everything necessary has been transported to the area of operation. And this is all time that is missing for the building site or with the customer.

This is the exact point where the clever transport and storage solutions from the house of BS Systems comes into play. Perfectly organized with an overview, lightweight and safe transportation when combined, short load securing times, high quality, optimum operating comfort and exceptional design quality. These are the buzzwords professional tradespeople associate with the popular L-BOXX, and more. The Soft-Storage-System **ProClick** has also become established on the market in the past year and has not only convinced the professional tradespeople but also the juries of two expert panels. BS Systems could celebrate on the double because the Tool belt system **ProClick** won this years **iF DESIGN AWARD** as well as the **PLUS X AWARD** and therefore counts among the carriers of the worldwide renowned **iF Design-Labels** as well as the **PLUS X AWARD seal of quality**.

# Press Release

**ProClick** - the robust and innovative Tool belt system has changed the way the professional tradesman carries their tools. It shapes the work process for the tradesman through a series of clever storage solutions for “on-body” transportation in a safer, more ergonomic and, above all, simpler fashion. The robust accessory tool pouches made of

high-quality PE fabric are available in different sizes and design variants. They can be clicked and released again with a single fingertip, thanks to the holder which is fixed to the belt. When the job assignment is completed or the tool requirements change, then the pouch can be simply exchanged, meaning inconvenient threading in and out through the belt is a thing of the past.

BS Systems see power and speed of innovation as major success factors in establishing the high-quality mobility systems L-BOXX and **ProClick** as the market standards long-term. Therefore, comprehensive system extensions have been announced for the beginning of the third quarter of this year for the **ProClick** product line, for example. You can certainly look forward to it!

The innovative storage and transport solutions from the manufacturer BS Systems, which are all combinable with each other, are the perfect solution for the professional tradesman. Whether in the workshop or on the building site, the tool is always at hand: mobile, reliable and safe
